

MODULAR ELECTRICAL DEVICE WITH CIRCUIT SPLITTING TAB**ABSTRACT OF THE INVENTION**

An electrical wiring device including a housing. The electrical wiring device further includes a first electrical device disposed within the housing. The first electrical device includes a plurality of terminals. The electrical wiring device further includes a second electrical device disposed within the housing. The second electrical switch includes a second plurality of terminals. The electrical wiring device further includes a insertable member or element coupled to at least one of the first plurality of terminals and at least one of the second plurality of terminals, thereby establishing electrical conductivity between the first and second electrical devices.
